Solaro Aire™

Solar Powered Attic Ventilation System

The Solaro Aire™ was designed by experts in the art of airflow technology with years of aerodynamic engineering experience. An excellent green energy product that is durable and dependable.

The Benefits of the Solaro Aire™

All of the Solaro Aire™ attic fans qualify for a 30% Federal Tax Credit on materials and installation through the American Recovery and Reinvestment Act of 2009.

The Solaro Energy Limited Lifetime Warranty is the strongest in the industry.

Doesn't cost one penny to operate!
It's completely powered by the sun!

Built to last a lifetime. Weather resistant powder coated finish on all exposed fan parts provide a handsome and durable finish.

Removes heat during the hot summer months. Removes moisture that can cause mold and mildew in the winter.

AMERICAN MADE
PRODUCTS DESIGNED AND MANUFACTURED
IN AMERICA BY AMERICANS

Solaro Aire™ High Profile

Ideal for applications where additional clearance (~2") is needed between the bottom of the fan and the roof. Perfect for snowy areas or "S" tile roofs where less clearance could cause airflow problems.

Solaro Aire™ Low Profile

Provides the same performance as high profile bases when additional clearance is not needed. Tucks in closer to the roof to be less conspicuous and more resistant to high winds.

Solaro Aire™ Remote

Allows the solar panel location to be independent from the fan's so each can be placed in the ideal part of the roof. Can also be used with larger solar panels for improved performance or to offset poor light environments.

Solaro Aire™ Gable

Can be mounted inside the attic over an existing gable vent or roof penetration to supercharge the vents already there. Remains hidden and out of the weather, save for the remote mounted solar panel. No large holes to cut in your roof.

Solaro Aire™ Tilt

20 watt or 30 watt solar panel, perfect for any installation that requires directing the panel towards the sun for better performance. 360° rotation and 35° tilt make it perfect for less than ideal fan locations.
